Data Analysis

Wikipedia

Analysis of data is a process of inspecting, cleaning, transforming, and modeling data with the goal of discovering useful information, suggesting conclusions, and supporting decision making.

Data Analysis

What is R?

R

R is a free software environment for statistical computing and graphics.

----R-project.org

History

- April 1st, 1997, R0.16, 奥克兰大学的Ihaka和Gentleman 发布了第一版本的R
- 1997年4月23日,0.49,CRAN网站发布,提供12个R的扩展包
- 1997年12月5日, 0.60, R成文GNU项目的一部分
- 2000年2月29日, 1.0, 第一个可用于生产环境的版本发布
- 2010年4月22日, 2.11, 支持64位Windows操作系统
- 2011年10月31日,2.14,提供全新的并行计算包
- 2013年4月, 3.0.0
- Now, 3.0.2

R语言在中国

- 2004年,国内专业人员开始翻译R语言官方文档
- 2006年,国内开始出版R语言书籍
- 2008年,在北京中国人民大学召开第一届中国R语言会议
- 2009年-2012年,每年分别在北京和上海举办中国R语言会议,迄今已举办五届
- 2012年,国人开发的Knitr包几乎成为R语言文档自动化的新标准,同时大量R语言畅销书籍被引进到国内翻译出版。
- 2013年,《R语言实战》、《ggplot2》、《R in a nutshell》...

R语言的现状

- 使用领域囊括统计分析、数据挖掘、生命科学、商业智能、 数据可视化、社交网络分析、电子商务、集成电路、金融、 烟草、传媒、咨询等
- 赞助R语言开发工作的机构包括AT&T、默沙东、Google、 新西兰电信,以及诸多大学及科研机构。
- 在商业产品中提供R语言支持的企业包括SAP、甲骨文、 Teredata、IBM、Revolution、Matlab、SAS、SPSS等。
- 2012第五届中国R语言会议(上海会场)获得大量赞助,吸引了400多人注册,到会人员几乎涉及R所有应用领域的国内知名企业。
- 2013年第六届中国R语言会议(北京,5月;上海,1112月)。

Pros and Cons

Class, Type and Dimension

Class, Type and Dimension

Everything in R is a object, every object has class, type and dimension.

```
class(obj)
typeof(obj)
dim(obj)
```

Data Types

```
\hbox{\it \## Error in library(GenomicRanges): there is no package called 'GenomicRanges'}
```

```
obj <- 1
class(obi)
## [1] "numeric"
obj <- "Gang Chen"
class(obj)
## [1] "character"
obi <- 1:3
class(obj)
## [1] "integer"
ranges <- GRanges(seqnames = c("chr1", "chr2"),
ranges = IRanges(start = c(1013, 4351),
end = c(2314, NA), width = c(NA, 1)),
strand = c("+", "-"))
```

```
class(list(a = 1, b = 2))
## [1] "list"
 class(matrix(1:16, ncol=4))
## [1] "matrix"
 class(array(1:64, c(4,4,4)))
## [1] "array"
 obj <- as.data.frame(obj)
 class(obi)
## [1] "data.frame"
 obi <- as.factor(c("male", "female"))</pre>
```

- Overview
 - Data Analysis
 - Data Aanlysis and R
 - Hello R!
 - Development Environment
 - References

- Data Visualization
- 4 R Packages

Types

```
obj <- 1
class(obj)
## [1] "numeric"
obj <- 1:3
class(obj)
## [1] "integer"
obj <- 1+2i
class(obj)
## [1] "complex"
```

Operations

Operators

- +, -, *, /, ==, =, <-
 - ^
- exp(), log(), log10(), log2()
- sqrt(), abs(), sin(), cos()
- round(), floor(), ceriling()
- factorial()

- Overview
 - Data Analysis
 - Data Aanlysis and R
 - Hello R!

Character

A character object is used to represent string values in R.

```
fname <- "Gang"
lname <- "Chen"
class(fname)
## [1] "character"</pre>
```

```
myPI <- 3.14
class(myPI)

## [1] "numeric"

myPI <- as.character(myPI)
class(myPI)

## [1] "character"</pre>
```

Character Operators

```
paste(fname, lname)
## [1] "Gang Chen"
substr("I am learning R", start=6, stop=13)
## [1] "learning"
sub("I am", "We are", "I am learning R")
## [1] "We are learning R"
```

Regular Expression

Regular Expressions == Problem

Some people,
when confronted with a problem,
think "I know, I'll use regular
expressions."
Now they have two problems.

Regular Expression in R

Regular Expression Functions

```
help(regex)
grep(), grepl(), regexpr(), gregexpr(), sub(), gsub()
```

Example

```
grep("a.", c("Gang", "Chen", "aab", "Ag", "ga"))
## [1] 1 3
```

Logical

```
u = TRUE; v = FALSE
u & v # u AND v
## [1] FALSE
u I v # u OR v
## [1] TRUE
 !u # negation of u
## [1] FALSE
```

$$4.3 - 0.7$$

$$4.3 - 0.7 == 3.6$$

$$0.7 + 3.6 == 4.3$$

$$0.7 * 6$$

$$4.2 / 6 == 0.7$$

Vector

A vector is a sequence of data elements of the same basic type.

```
a = c(1,2,3)
b = c(T, F, F, T)
chars = c("Gang", "Chen", "AA", "Aa", "aB")
```

Arithmetic operations of vectors are performed memberwise.

```
All operators are applied to vectors
 a^2
## [1] 1 4 9
 ! b
## [1] FALSE TRUE TRUE FALSE
 grep("a.",chars)
## [1] 1 5
```

actitech *****

of Hong Kong

Vector Arithmetic

[1] 5 8 9 8 5

```
a = c(1,2,3,4,5)
b = c(5,4,3,2,1)
c(a, b)
## [1] 1 2 3 4 5 5 4 3 2 1
a + b
## [1] 6 6 6 6 6
a * b
```

Recycling Rule:

Hong Kong

Vector Index

```
a = c("one", "two", "three", "four", "five")
a[3]
## [1] "three"
a[2:4]
## [1] "two" "three" "four"
a[-3]
## [1] "one" "two" "four" "five"
a[8]
## [1] NA
```

S4 Classes and methods

History

- 1976, Rick Becker and John Chambers, S on Honeywell OS
- Ported to UNIX, S2
- Around 1986, functional programming and object self-description, S3
- 1992, concept of classes and methods, S4
- 2010, Reference Classes (RC), R 2.12

appendix in Software for Data Analysis by Chambers

S4 in R

```
library(stats4)
library(pryr)
## Error in library(pryr): there is no package called 'pryr'
y \leftarrow c(26, 17, 13, 12, 20, 5, 9, 8, 5, 4, 8)
nLL <- function(lambda) -sum(dpois(y, lambda, log = TRUE))</pre>
fit <- mle(nLL, start = list(lambda = 5), nobs = length(y))</pre>
isS4(fit)
## [1] TRUE
 otype(fit)
## Error in eval(expr, envir, enclos): "otype"
isS4(nobs)
```

Hong Kong

S4 Classes and methods

Defining classes and creating objects

```
setClass("Person",
 slots = list(name = "character", age = "numeric"))
setClass("Employee",
 slots = list(boss = "Person"),
 contains = "Person")
alice <- new("Person", name = "Alice", age = 40)
john <- new("Employee", name = "John", age = 20, boss = alice)</pre>
```

S4 Classes and methods

access slots of an S4 object

```
alice@age
slot(john, "boss")
```

S4

R

S4 Classes and methods

Creating new methods and generics

```
setGeneric("union")
setMethod("union",
 c(x = "data.frame", y = "data.frame"),
 function(x, y) {
   unique(rbind(x, y))
setGeneric("myGeneric", function(x) {
 standardGeneric("myGeneric")
})
```

Standard I/O

```
scan()
print()
cat()
```

Input

```
read.table()
readLines()
readChar()
readBin()
scan()
```

Output

```
write.table()
write()
```
